### **Are You a High Achiever? Even the Best Products Might Leave You Dissatisfied**

Make the honor roll, go for the promotion, or try the tastiest entrée on the menu. In almost every facet of our culture, we are told to “go for the gold.” So, why settle for “good enough” when “something better” is within reach? According to a new study in the [Journal of Consumer Research](#), constantly striving for the best may be magnifying negative feelings like regret and dissatisfaction in other parts of our daily lives.

“We found that individuals who have a ‘must have the best’ mindset experience more regret and are less satisfied with the products they purchase or consume. They are also more likely to return the items or switch brands entirely,” write authors Jingjing Ma and Neal J. Roese (both Kellogg School of Management, Northwestern University).

Across seven experiments, the authors examined the impact of what they term the “maximizing mindset” on participants’ ability to make decisions when they are feeling or behaving in a certain way. Consumers with a maximizing mindset typically have a tendency to compare and adopt a goal of getting the best, even if it requires them to work harder, search more deeply, and ultimately perform better than their peers.

For example, one study showed that participants who had compared a series of singers and tried to select the one with the best vocal ability later experienced greater regret and dissatisfaction concerning their smart phone than those who just looked at the pictures of these singers. This implies that watching American Idol, Dancing with the Stars, or X Factor and trying to pick the best performer can actually make people feel more regretful/dissatisfied about their subsequent product choices and they are more likely to return the product and switch brands.

“Our research shows the potential impact of the maximizing mindset on post-purchase regret, customer satisfaction, and brand loyalty, particularly for companies claiming to offer the best available product on the market. We also offer an insight on the impact the maximizing mindset has on our daily lives. Constantly comparing and focusing on getting the best can have a negative effect on our psychological well-being, particularly when we do not get the best,” the authors conclude.
